

Purpose

This document describes the new feature added in Integrator WebPlus version 3.0.0.11262 released on 16 October 2015.

Application(s) Changed

This change applies to the functionality in the following Integrator application(s):

Integrator Product	Applies To
Web	
WebPlus	
Enterprise Cloud	X
Enterprise Server	

New Feature Added in this Version

The ability to print a summary label was added in this version. The software can now be configured to print a label containing summary information after a shipment's regular shipping labels have printed. For example, if the user prints three package labels in one order, the software can be configured to automatically print a fourth, summary label. The summary label shows the list of tracking numbers in the order in both printed and barcoded forms. Additionally, the summary label displays the consignee name and address, reference numbers, and estimated postage. The summary label replaces the peel-off section for customers that routinely process multi-package orders and who prefer to have one 4-inch by 6-inch label, rather than multiple peel-offs to apply to their paperwork. The purpose of the barcoded tracking numbers on the summary label is the same as with the peel-off: the main shipping labels have additional information encoded in the barcode, so the user cannot scan those to get only the tracking number, while they can on the summary label.

Version
